## 2. About this document

This is the users' manual for DSI Adapters available for SIRIUS DAQ system, KRYPTON DAQ modules, IOLITE DAQ and Control System, MINITAURs or DEWE-43 DAQ module.

### 2.1. Legend

The following symbols and formats will be used throughout the document.

#### **Important**

It gives you important information about the subject.  
Please read carefully!

#### **Hint**

It gives you a hint or provides additional information about a subject.

#### **Example**

Gives you an example of a specific subject.

### 2.2. Online versions

#### 2.2.1. Device Technical Reference Manual

The most recent version of this manual can be downloaded from our homepage:

<https://download.dewesoft.com/list/manuals-brochures/hardware-manuals>

In the *Hardware Manuals* section click the download link for the *Device® technical reference manual*.

#### 2.2.2. DEWESoft® User Manual

The DEWESoft® User Manual document provides basics and additional information and examples for working with DEWESoft® and certain parts of the program.

The latest version of the DEWESoft® tutorials can be found here:

<https://download.dewesoft.com/list/manuals-brochures/software-manuals>

In the Software Manuals section click the download link of the DEWESoft X User Manual entry.

2.3. DSI Adapters Overview

DSI adapters are TEDS IEEE 1451.4 equipped sensor adapters that turn any of our DSUB9 universal analog input amplifiers into direct IEPE, charge, thermocouple, shunt, voltage, LVDT or RTD input...

|             |        |         |                 |             |              |
|-------------|--------|---------|-----------------|-------------|--------------|
| <b>IEPE</b> |        |         |                 | <b>LVDT</b> |              |
| IEPE        | Charge | Voltage | Current         | LVDT        | Thermocouple |
|             |        |         |                 |             |              |
|             |        | RTD     | TEDS compatible |             |              |

### 2.3.1. Features of DSI adapters:

- **EXTEND ANALOG INPUTS:** DSI adapters are compatible with any Dewesoft amplifier with a DSUB-9 analog input, independent of the product family. They will fit SIRIUS DAQ system, KRYPTON DAQ modules, IOLITE DAQ and Control System, MINITAURS or DEWE-43 DAQ instrument.
- **PLUG-AND-PLAY WITH TEDS:** All DSI adapters have a TEDS chip built-in for automatic sensor detection and plug-and-play setup. Just connect the sensor to the DSI adapter and DSI adapter to one of our DSUB-9 analog inputs and everything from scaling, units, calibration data, etc. will be configured automatically.
- **COMPACT AND RUGGED:** All electronics are built into small and rugged DSUB-9 aluminum housing with screw connectors to firmly screw adapters to the analog input channel.

#### Hint

When isolation is required, you must use the DSI-adapters on isolated DewesoftX® devices: e.g. Sirius modules.

All DSI-adapters are the size of a DSUB-9 housing, which contains the electronics as well as the sensor connector. The miniature electronics of each DSI sensor also contain a TEDS chip in which the identification, calibration and configuration data of the DSI are stored. TEDS data are read automatically by the DewesoftX® software and are immediately applied to the channel setup.

#### Hint

When using DSI® adapters, DewesoftX® can read the TEDS information of the adapter and also the TEDS information of any sensors that are connected to the adapter (the old MSI adapters could not read the TEDS of the connected sensor).

\*The Bridge Completion Adapters are available in a separate [technical reference manual](#).

## 2.4. DSI: General Specifications

| Connectors              |                                                                                                                                              |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| DAQ interface connector | DB9 Male                                                                                                                                     |
| Sensor connector        | See individual adapter specification                                                                                                         |
| Environmental           |                                                                                                                                              |
| Operating Temperature   | -10 to 60 °C                                                                                                                                 |
| Storage Temperature     | -40 to 85 °C                                                                                                                                 |
| Humidity                | 5 to 95 % RH non-condensing at 50 °C                                                                                                         |
| IP rating               | IP50                                                                                                                                         |
| RFI susceptibility      | ±0.5 % span error at 400 MHz, 5 W, 3 m                                                                                                       |
| Shock & Vibration       | Vibration sweep sinus (EN 60068-2-6:2008)<br>Vibration random (EN 60721-3-2: 1997 - Class 2M2)<br>Shock (EN 60068-2-27:2009)<br>MIL-STD-810D |

### 2.4.1. Calibration

The DSI-adapters are calibrated at 23 °C ± 3 °C and meet their specifications when leaving the factory. The time interval for calibration depends on environmental conditions. A two year calibration interval is recommended.

#### Important

Total measurement accuracy depends on the adapter accuracy and host amplifier accuracy!

### 2.4.2. DSI: Pin-out

*DSI connector: pin-out (DSUB-9 male)*

| Pin | Name  | Description   |
|-----|-------|---------------|
| 1   | Exc + | Excitation +  |
| 2   | In+   | Input +       |
| 3   | Sns-  | Sense -       |
| 4   | GND   | Ground        |
| 5   | N.C.  | Not connected |
| 6   | Sns+  | Sense +       |
| 7   | In-   | Input -       |
| 8   | Exc-  | Excitation -  |
| 9   | TEDS  | TEDS          |

### 2.4.3. Environmental

#### **Warning**

All DSI® specifications within this manual are valid at 25 °C.  
All DSI-adapters are produced according to ISO 9001 and ISO 14001.

### 2.4.4. DSI adapters / TEDS sensor support

Since there is an inbuilt TEDS device in the adapter itself and if ☒ DSI adapters/TEDS sensors under hardware setup are selected, adapter will be recognised and proper EXC. Voltage will be set automatically.

Please check if you are using the latest software where LVDT Adapter is supported.

Options - Settings

DSI adapters/TEDS sensors checkbox

| 7  | Unused |   | AI 7 | SIRIUS-STGv2 | 50 V      | 0 V     | Voltage     | -50,00   | 0,000  | 50,00   | V     | Zero | Setup |
| 8  | Unused |   | AI 8 | SIRIUS-STGv2 | 50 V      | 0 V     | Voltage     | -50,00   | -0,001 | 50,00   | V     | Zero | Setup |

DSI-LVDT adapter is recognized and set automatically

### 2.4.4.1. Manual operation

If DSI adapters/TEDS sensors are left unchecked under hardware setup then sensor supply and range has to be set manually.

*DSI adapters/TEDS sensors checkbox is left unchecked*

Under Channel setup for channel N, set Excitation voltage from 10V to 15V maximum according to Electrical Specifications.

*Excitation voltage setting*

## 2.5. DSI-TH-x

DSI-TH-K

Basic circuit design of DSI-TH-x

The DSI-TH-x allows thermocouple temperature measurement with Dewesoft devices. The common thermocouple types K, J, T and E are supported. A high precision cold junction compensation is included in the adapter. The non-linearity of the thermocouple is compensated for in software.

A TEDS chip provides automatic adapter identification by software and the calibration data. In operation with the isolated SIRIUSi modules you will get a fully isolated thermocouple amplifier.

### Note

In operation with the differential SIRIUS® modules (or Krypton® / DEWE-43, IOLITE) only isolated thermocouples should be used, because the thermocouple input is single-ended.

## 2.5.2. DSI-TH Input Connection

## 2.6. DSI-TH-UNI

DSI-TH-UNI adapter has universal thermocouple input allowing it to connect practically any type of thermocouple (K, J, T, R, S, N, E, B, C).

DSI-TH-UNI has integrated cold junction compensation with CJC accuracy of 0.5 °C.

Universal thermocouple DSI adapter comes in an attractive compact chassis mounted directly on the host amplifier without any additional cable.

Host amplifier configuration and calibration coefficients can be read via TEDS.

DSI-TH-UNI

#### Note

In operation with the differential SIRIUS® modules (or Krypton® / DEWE-43, IOLITE) only isolated thermocouples should be used, because the thermocouple input is single-ended.

### 2.6.1. DSI-TH-UNI Specifications

| General specifications                                                                                                                                                                     |                                                       |

2.7.2. DSI-RTD Input Connection

2-wire sensor connection

3-wire sensor connection

4-wire sensor connection

2.7.3. DSI-RTD Binder connector pinout

Binder 5-pin (female)

| Pin | Name   | Description       |
|-----|--------|-------------------|
| 1   | Exc+   | Excitation+       |
| 2   | Sns+   | Sense+            |
| 3   | Exc-   | Excitation-       |
| 4   | Sns-   | Sense-            |
| 5   | 3-wire | 3-wire connection |

DSI-RTD:  
Connector on device: 09 0416 00 05 M9 socket  
Mating connector: 99 0413 00 05 M9 cable plug

DSI-RTD-LIS4-TNC:  
Connector on device: ERA.IS.304.CLL  
Mating connector: FFA.IS.304.CLACxxx

## 2.8. DSI-ACC / DSIw-ACC

The DSI-ACC is designed to operate with IEPE sensors and IEPE compatible sensors (e.g. ICP®). The adapter provides a constant current source and high pass filter. Depending on the application, different excitation levels and high pass filters are available. There is also a waterproof (DSIw-ACC) available for IEPE sensors.

DSI-ACC

Basic circuit design of DSI-ACC

### Important

In operation with the isolated SIRIUSi modules you will get a fully isolated amplifier. In operation with differential modules (SIRIUS®, Krypton™, DEWE-43, IOLITE) the input configuration is single-ended.

## 2.8.1. DSI-ACC / DSIw-ACC Specifications

| Inputs specifications             |                                                                                                                          |                 |                                                                |                                                                |

### Important

Additionally to HW high-pass filter (HPF), a SW IIR filter Butterworth 2nd order is applied. Its cut-off frequency is 1/10 of the cut-off frequency of the HW HPF filter.

Example:

DSI-ACC has an additional SW filter, Butterworth, 2nd order HPF,  $f_c = 0.08$  Hz.

DSI-ACC-0.16Hz has additional SW filter, Butterworth, 2nd order HPF,  $f_c = 0.016$  Hz

2.8.2. DSI-ACC / DSIw-ACC Input Connection

2.8.3. DSI-ACC / DSIw-ACC connector pinout

ACC connector: pin-out (BNC)

| Pin | Description |
|-----|-------------|
| 1   | IEPE        |
| 2   | Gnd         |

## 2.9. DSI-CHG-50

The DSI-CHG adapter can be used for charge sensors up to 50,000 pC with Dewesoft devices.

*DSI-CHG-50*

*Basic circuit design of DSI-CHG-50*

### **Important**

In operation with the isolated SIRIUSi modules you will get a fully isolated charge amplifier. In operation with differential modules (SIRIUS®, Krypton®, DEWE-43, IOLITE) the input configuration is single-ended.

## 2.9.1. DSI-CHG-50 Specifications

| Inputs specifications       |                                                                                                              |
|-----------------------------|--------------------------------------------------------------------------------------------------------------|
| Sensor connector            | BNC                                                                                                          |

| Accuracy                    | 0.5 %                                                                                                        |
| Gain drift                  | 100 ppm/°C                                                                                                   |
| Supply voltage              | ±5 V (±1 %)                                                                                                  |
| Power consumption           | max. 100 mW                                                                                                  |
| Input configuration         | Isolated (max. 350 VDC) when using with isolated SIRIUSi modules, else single-ended                          |
| Bandwidth                   | 0.07 Hz up to 300 kHz (limited by bandwidth of host amplifier)                                               |
| Low-pass filter             | 10 Hz to 100 kHz (depending on host amplifier)                                                               |
| Range                       | 1,000 / 10,000 / 50,000 pC (SIRIUS-HS series offers more ranges)                                             |
| Typ. SNR @ 30 kHz bandwidth | up to 125 dB (limited by the SNR of the host amplifier)                                                      |
| Max. offset                 | 20 pC (compensated in DEWESoft® by software filter)                                                          |
| High-pass filter            | 0.07 Hz, 1 Hz, 10 Hz                                                                                         |
| Amplifier settings          | Automatically selected by software<br>- Measurement: Voltage<br>- Range: ±0.1 to ±10 V<br>- Excitation: 10 V |

### Important

Additionally to HW high-pass filter (HPF), a SW IIR filter Butterworth 2nd order is applied. Its cut-off frequency is 1/10 of the cut-off frequency of the HW HPF filter.

Example:

DSI-CHG-50 has additional SW filter, Butterworth, 2nd order HPF,  $f_c = 0.007$  Hz.

## 2.9.2. DSI-CHG-50 Input Connection

2.9.3. DSI-CHG-50 connector pinout

DSI-CHG-50 connector: pin-out (BNC)

| Pin | Description |
|-----|-------------|
| 1   | In+         |
| 2   | In-         |

2.10. DSI-CHG-DC

The DSI-CHG-DC adapter can be used for charge sensors up to 50,000 pC with Dewesoft devices.

DSI-CHG-DC

Important  
If the adapter is not recognized on some amplifiers (SIRIUS-STG), set Excitation to more than 0 V.

## 2.10.1. DSI-CHG-DC Specifications

| Inputs specifications |                                                                                                                                                                                                                                                                                                                                                                                                         |

2.10.2. DSI-CHG-DC Input Connection

2.10.3. DSI-CHG-DC connector pinout

DSI-CHG-DC connector: pin-out (BNC)

| Pin | Description |
|-----|-------------|
| 1   | In+         |
| 2   | In-         |

## 2.11. DSI-V-200

This adapter consists of an active voltage divider (50:1), which allows an input range up to  $\pm 200$  V. The picture below shows the basic configuration of the amplifier circuit.

DSI-V-200

Basic circuit design of DSI-V-200

### Important

In operation with the isolated SIRIUSi modules you will get a fully isolated amplifier. In operation with differential modules (SIRIUS®, Krypton®, DEWE-43, IOLITE) the input configuration is differential.

## 2.11.1. DSI-V-200 Specifications

| Inputs specifications        |                                                                                                                          |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| Sensor connector             | BNC                                                                                                                      |
| Ranges                       | $\pm 200$ V, $\pm 50$ V, $\pm 5$ V, $\pm 0.5$ V (SIRIUS-HS series offers more ranges)                                    |
| DC Accuracy                  | $\pm 0.06$ % of reading $\pm 0.02$ % of range $\pm 5$ mV                                                                 |
| Bandwidth (-3 dB)            | 300 kHz (limited by bandwidth of host amplifier)                                                                         |
| Low-pass filter              | 10 Hz to 100 kHz (depending on host amplifier)                                                                           |
| Common mode voltage range    | $\pm 200$ V                                                                                                              |
| Input overvoltage protection | $\pm 250$ V                                                                                                              |
| Input impedance In+          | 1 M $\Omega$                                                                                                             |
| Input impedance In-          | 1 M $\Omega$                                                                                                             |
| Gain drift                   | Typical 15 ppm/K (max. 30 ppm/K)                                                                                         |
| Input offset drift           | Typical 10 $\mu$ V/K (max. 25 $\mu$ V/K)                                                                                 |
| Input attenuation            | 50 $\pm 0.5$ % (uncalibrated)                                                                                            |

### Warning

For safety reasons maximum 50 V may be applied to the BNC input-connectors! Refer to the regulation of maximum allowable touch potential.

## 2.11.2. DSI-V-200 Input Connection

### 2.11.3. DSI-V-200 connector pinout

*DSI-V-200 connector: pin-out (BNC)*

| Pin | Description |
|-----|-------------|
| 1   | In+         |
| 2   | In-         |

## 2.12. DSI-20mA/DSIw-20mA

The DSI-20mA and DSIw-20mA adapters allow current measurement of up to 20mA. It uses a 50  $\Omega$  shunt resistor with 0.01 % accuracy and 0.2 ppm/K temperature drift (0.05 ppm/K in temperature range 0 °C to 60 °C). This is a product made for sensing current from industrial sensors with 4-20 mA output. DSIw-20mA is a waterproof adapter suited for mounting on a SIRIUSw or KRYPTON STG.

## 2.16. DSI-LVDT

LVDTs (Linear Variable Differential Transformers) are linear position sensors. They are used to measure linear displacement and position over relatively short distances.

DSI-LVDT

### 2.16.1. Electrical specifications

The DSI LVDT adapter is powered by EXC voltage. The LVDT adapter is compatible with SIRIUS(i) (variable EXC), DEWE-43A type instrument (fixed +/-5V EXC) and KRYPTON STG and IOLITE STG amplifiers.

| General specifications          |                                                       |
|---------------------------------|-------------------------------------------------------|
| Sensor connector                | DB9 Female                                            |
| Power supply Exc. Voltage       | 10 V – 15 V, from EXC+ to EXC- outputs                |
| Power supply Exc. Current       | 44 mA, from EXC+ to EXC- outputs (see 1)              |
| Output voltage                  | 1.00 V = 500 mV/V (see 2)                             |
| Output bandwidth                | 1 kHz                                                 |
| Gain error                      | 1 % of Full Scale                                     |
| Output TCR                      | 55 ppm/K of Full Scale                                |
| Sensor VTR = S x d, Sensitivity | 2000 mV/V maximum                                     |
| Sensor supported type           | Differential LVDR or RVDT, Inductive Half-Bridge LVDT |
| Sensor Exc. voltage             | 2.88 Vrms (differential) (see 3)                      |
| Sensor Exc. frequency           | Selectable 4.02 kHz / 9.60 kHz typical; 2.5% error    |
| Phase compensation              | -50° to +85° @ 4kHz; -75° to +70° @ 10kHz             |
| TEDS                            | 1024-bit, 1-Wire EEPROM (see 4)                       |

1) Absolute maximum rating, specified for SIRIUSi

2) For sensor VTR (Voltage Transfer Ratio) = 1000 mV/V

3) Sinusoidal, 50dB THD typical, not possible to sync from adapter to adapter

4) Only one device per TEDS line is supported. Can be set to internal (adapter) or external (sensor)

2.16.2. LVDT connectors

2.16.2.1. DSUB Input connector pinout

9 pin DSUB male

| Pin | Name  | I/O         | Description                     |
|-----|-------|-------------|---------------------------------|
| 1   | PS+   | I, Power    | Power Supply +                  |
| 2   | Out+  | O, Signal   | Adapter Output (Single ended) + |
| 3   | PSEn- | I, Signal   | Power Supply Enable -           |
| 4   | AGND  | I           | Analog Ground                   |
| 5   | NC    | I/O         | Reserved / Not Connected        |
| 6   | PSEn+ | I, Signal   | Power Supply Enable +           |
| 7   | Out-  | O, Signal   | Adapter Output (Ground) -       |
| 8   | PS-   | I, Power    | Power Supply -                  |
| 9   | TEDS  | I/O, Signal | TEDS                            |

2.16.2.2. DSUB Output connector pinout

9 pin DSUB female

| Pin | Name | I/O       | Description                 |
|-----|------|-----------|-----------------------------|
| 1   | Exc+ | O, Power  | Sensor supply, excitation + |
| 2   | In+  | I, Signal | Sensor Output +             |
| 3   | Sns- | I, Signal | Sense -                     |
| 4   | AGND | I         | Analog Ground               |
| 5   | NC   | I/O       | Reserved / Not Connected    |
| 6   | Sns+ | I, Signal | Sense +                     |
| 7   | In-  | I, Signal | Sensor Output -             |
| 8   | Exc- | O, Power  | Sensor supply, excitation - |
| 9   | NC   | I/O       | Reserved / Not Connected    |

### 2.16.2.3. LEMO Input connector pinout

8 pin LEMO 2B.308 male

| Pin | Name | I/O         | Description                     |
|-----|------|-------------|---------------------------------|
| 1   | PS+  | I, Power    | Power Supply +                  |
| 2   | Out- | O, Signal   | Adapter Output (Ground) -       |
| 3   | Out+ | O, Signal   | Adapter Output (Single ended) + |
| 4   | PS-  | I, Power    | Power Supply -                  |
| 5   | MGND | I           | Mechanical Ground, chassis      |
| 6   | TEDS | I/O, Signal | TEDS                            |
| 7   | AGND | I           | Analog Ground                   |
| 8   | NC   | I/O         | Reserved / Not Connected        |

### 2.16.2.4. LEMO Output connector pinout

8 pin LEMO 2B.308 female

| Pin | Name | I/O         | Description                 |
|-----|------|-------------|-----------------------------|
| 1   | Exc+ | O, Power    | Sensor supply, excitation + |
| 2   | In-  | I, Signal   | Sensor Output -             |
| 3   | In+  | I, Signal   | Sensor Output +             |
| 4   | Exc- | O, Power    | Sensor supply, excitation - |
| 5   | MGND | I           | Mechanical Ground, chassis  |
| 6   | NC   | I/O, Signal | Reserved / Not Connected    |
| 7   | AGND | I           | Analog Ground               |
| 8   | NC   | I/O         | Reserved / Not Connected    |

### 2.16.3. Output bandwidth - Magnitude and Phase response

Image 1: Typical magnitude response for 4kHz EXC

Image 2: Typical phase response for 4kHz EXC

Image 3: Typical magnitude response for 10kHz EXC

Image 4: Typical phase response for 10kHz EXC

### 2.16.4. Theory of operation

DSI LVDT Adapter uses a unique ratiometric architecture to eliminate several of the disadvantages associated with traditional approaches to LVDT interfacing. The benefits of this new circuit are: minimal adjustments are required; temperature stability is improved; and transducer interchangeability is improved.

Image 5: Functional block diagram

LVDT adapter SENSE inputs are connected as B-Inputs and adapters IN are connected as A-Inputs. Phase Lead / Lag circuit will compensate for the difference of the sensor output in reference to Exc. and Sense inputs.

Output signal level will depend on the phase difference between sensor output and Sense inputs.

Image 6: LVDT adapter output sensitivity to input signal phase lead/lag, 1:1 sensor

Two examples are shown for sensors with sensitivity = 0,5. Output signal level is 1/2 of the Exc. Signal. Sensor output phase lag is 45°. LVDT adapter output is  $\approx 0,35$  ( $\approx 1V_{exc} \cdot \text{sensitivity} \cdot 0,70$ ) according to Image 2.

When phase compensation matches phase lead / lag of sensor output LVDT adapter output will be at its maximum = 0,5 ( $= 1V_{exc} \cdot \text{sensitivity} \cdot 1,00$ ).

Image 7: Example: 45° sensor output , no compensation

Image 8: Example: 45° sensor output, 45° compensation

## 2.16.5. Operation

Connect the LVDT Adapter to your SIRIUS or DEWE-43 channel and connect to SENSOR input your sensor probe.

Image 13: Adapter setting, frequency, phase

Depending on the sensor used, select the excitation frequency of the adapter as close as possible to frequency in sensors specifications.

With phase compensation adjust the measured output to maximum output value.

### 2.16.5.1. Phase adjustment procedure

Please ensure that the pin pairs Exc/Sns are connected with each other (6-wire-connection).

Phase adjustment steps:

1. Manually set the sensor to e.g.  $\frac{3}{4}$  of the measurement range, e.g. if you have a displacement sensor with 50mm range, fix it at position 35mm.
2. In the Dewesoft Analog in → Channel setup → check the signal. Adjust the phase with the screw on the DSI-LVDT (blue circle in picture) until the signal is maximized.
3. Then do the calibration (e.g. 2-point-calibration directly in the channel setup)

## 2.16.5.2. Connections

**Hint**

6-wire connection only shown. 4-wire also possible, connect Sns and Exc signals on the adapter side of the connector.

**Important**

Input - (pin7) shall be connected to half bridge completion resistor divider assembled with discrete resistors with the following recommended specifications: Resistance 1k $\Omega$ , Tolerance 0.1%, Temperature coefficient 15ppm, Power 0,125W. This connection is preferred over the previous connection IN- to GND (so called "noisy GND").

Image 14: Solder side of the DB9 male, HB divider resistors

## 2.17. DS-16xLVDTr

DS-16xLVDTr uses a unique ratiometric architecture to eliminate several of the disadvantages associated with traditional approaches to LVDT interfacing. DS-16xLVDTr combines 16 channels of DSI-LVDT adapters in a 19"-rack housing with 1U height.

Main advantage of the new design is a synchronous excitation signal provided from the external function generator to a BNC front connector (IN connector). When using multiple DS-LVDTr devices the EXC signal can be daisy-chained from the BNC OUT connector to the BNC IN connector on the other device.

Additionally, there are 16 DSUB-9M (male) connectors on the front panel of DS-16xLVDTr for the connection to the Dewesoft host amplifier. Each connector is a trimmer used for phase adjustment.

On the back panel are 16 DSUB-9F (female) connectors for the sensor connection. DS-16xLVDTr supports measurements with full-bridge and half-bridge LVDT sensor types.

DS-16xLVDTr

### 2.17.1. General specifications

| Parameter                     | Description                                                                                                          |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Power supply Exc. Voltage     | 10V – 15V, from EXC+ to EXC- outputs<br>(SIRIUS STGv2 = 15V supply)                                                  |
| Power consumption per channel | 320mW (15V supply, no load)<br>800mW (15V supply, 100R load on 3Vrms)                                                |
| Output voltage max.           | 500mV for 1000mV/V HB LVDT                                                                                           |
| Output bandwidth              | 1kHz (-6dB, 90deg phase)                                                                                             |
| Gain error                    | 1% of Full Scale                                                                                                     |
| Output TCR                    | 55ppm/K of Full Scale                                                                                                |
| Sensor supported type         | Full Bridge / Half-Bridge LVDT<br>impedance min. 120R.                                                               |
| SYNC Input Voltage            | 500mVrms typical recommended<br>1700mVrms max recommended                                                            |
| Sensor Exc. voltage           | 3Vrms max (15V supply)<br>set on SYNC Inputs:<br>1.76 * Sync Input (Vrms) @ 4kHz<br>1.70 * Sync Input (Vrms) @ 10kHz |
| Sensor Exc. frequency         | 4kHz to 10kHz typical, set on SYNC Inputs                                                                            |
| Phase compensation            | -50° to +85° @ 4kHz<br>-75° to +70° @ 10kHz                                                                          |
| TEDS                          | 1024-Bit, 1-Wire EEPROM                                                                                              |
| Operating temperature         | -20°C to +50°C                                                                                                       |
| Ingress protection            | IP20                                                                                                                 |
| Humidity                      | 5% to 85% RH non condensing @ 50°C                                                                                   |
| Dimensions                    | 444 x 221 x 44 mm (W x D x H)                                                                                        |
| Weight                        | 2300g                                                                                                                |

For more detailed information about the DS-16xLVDTTr please check the [DS-16xLVDTTr-manual](#) on our web page.

2.17.2. LVDTr connectors

2.17.2.1. SYNC inputs

2x BNC SYNC input connectors

BNC SYNC input pinout

| Parameter                    | Description    | Comment                                   |
|------------------------------|----------------|-------------------------------------------|
| Input connectors             | 2 x BNC        | Parallel, Not isolated                    |
| Coupling                     | AC - High pass | -3dB @ 16Hz (1st order)                   |
| Input impedance              | 1MR            |                                           |
| Overvoltage Protection / ESD | 36V            | Bidirectional TVS                         |
| Overcurrent Protection       | 2.4mA typical  | Resettable                                |
| Input Bandwidth              | 4kHz           | Att: 0%<br>17deg phase relative to input  |
|                              | 10kHz          | Att: <2%<br>45deg phase relative to input |
|                              | 20kHz          | -3dB @ 20kHz (2nd order)                  |

2.17.2.2. Input connector pinout

9 pin DSUB female

| Pin | Name   | I/O       | Description                   |
|-----|--------|-----------|-------------------------------|
| 1   | Exc+   | O, Power  | Sensor supply, excitation +   |
| 2   | In+    | I, Signal | Sensor Output +               |
| 3   | Sns-   | I, Signal | Sense -                       |
| 4   | AGND   | I         | Analog Ground                 |
| 5   | Reser. | I/O       | Reserved / Not Connected      |
| 6   | Sns+   | I, Signal | Sense +                       |
| 7   | In-    | I, Signal | Sensor Output - <sup>1.</sup> |
| 8   | Exc-   | O, Power  | Sensor supply, excitation -   |
| 9   | Reser. | I/O       | Reserved / Not Connected      |

Important

- Optional **internal** HB completion: Do not connect Sensor Output-. Pin-7 internally terminated as Half-Bridge. Must specify when ordered!

### 2.17.2.3. Output connector pinout

9 pin DSUB male

| Pin | Name   | I/O         | Description                     |
|-----|--------|-------------|---------------------------------|
| 1   | PS+    | I, Power    | Power Supply +                  |
| 2   | Out+   | O, Signal   | Adapter Output (Single ended) + |
| 3   | PSEn-  | I, Signal   | Power Supply (sns) -            |
| 4   | AGND   | I           | Analog Ground                   |
| 5   | Reser. | I/O         | Reserved / Not Connected        |
| 6   | PSEn+  | I, Signal   | Power Supply (sns) +            |
| 7   | Out-   | O, Signal   | Adapter Output (Ground) -       |
| 8   | PS-    | I, Power    | Power Supply -                  |
| 9   | TEDS   | I/O, Signal | TEDS                            |

### 2.17.2.4. Typical connection to DEWESoft amplifier w. DSUB-9 connector

Use shielded DSUB9-male to DSUB9-female extension cable.

### 2.17.3. Output bandwidth - Magnitude and Phase Response

*Typical magnitude response for 4kHz EXC*

*Typical phase response for 4kHz EXC*

Typical magnitude response for 10kHz EXC

Typical phase response for 10kHz EXC

2.17.4. Sync input to LVDT-EXC transfer function

Sync input to LVDT-EXC transfer function

Transfer function:

|            | Output @4kHz (Vrms) | Output @4.8kHz (Vrms) | Output @10kHz (Vrms) |
|------------|---------------------|-----------------------|----------------------|
| Transfer-K | 1.76                | 1.76                  | 1.7                  |

$LVDT-EXC\ Output\ (Vrms) = Transfer-K * Sync\ Input\ (Vrms)$

Best overall Noise floor results were observed at Sync input between 400mVrms and 600mVrms.

**Proposed best Sync input voltage setting: 500mVrms.**

Calculated LVDT-EXC voltage: **880mVrms.**

### 2.17.5. Theory of operation

DSI - LVDT Adapter uses a unique ratiometric architecture to eliminate several of the disadvantages associated with traditional approaches to LVDT interfacing. The benefits of this new circuit are: minimal adjustments are required; temperature stability is improved; and transducer interchangeability is improved.

Functional block diagram

LVDT adapter SENSE inputs are connected as B-Inputs and adapters IN are connected as A-Inputs. Phase Lead / Lag circuit will compensate for the difference of the sensor output in reference to Exc. and Sense inputs.

Output signal level will depend on the phase difference between the sensor output and Sense inputs.

LVDT adapter output sensitivity to input signal phase lead/lag, 1:1 sensor

Two examples are shown for sensors with sensitivity = 0,5. Output signal level is of the Exc. Signal. Sensor output phase lag is 45°. LVDT adapter output is  $\approx 0,35$  ( $\approx 1V_{exc} \cdot \text{sensitivity} \cdot 0,70$ ).

When phase compensation matches phase lead / lag of sensor output LVDT adapter output will be at its maximum = 0,5 ( $= 1V_{exc} \cdot \text{sensitivity} \cdot 1,00$ ).

Example: 45° sensor output, no compensation

Example: 45° sensor output, 45° compensation

## 2.17.6. Connections

### 2.17.6.1. Typical Full Bridge sensor connection

6-wire connection only shown. 4-wire also possible, connect Sns and Exc signals on the adapter side of the connector.

### 2.17.6.2. Typical Half Bridge sensor connection

*External Half Bridge completion*

*Optional internal Half Bridge completion*

Input - (pin7) shall be connected to half bridge completion resistor divider assembled with discrete resistors with the following recommended specifications:

- Resistance 1k $\Omega$ ,
- Tolerance 0.1%,
- Temperature coefficient 15ppm,
- Power 0,125W.

This connection is preferred over the previous connection IN- to GND (so called “noisy GND”).

External Half Bridge completion, DSUB9 solder side view

Example sensor pinout

2.17.6.3. Typical connection to DEWESoft amplifier w. DSUB-9 connector

Use shielded DSUB9-male to DSUB9-female extension cable.

## 3. Warranty information

### Notice

The information contained in this document is subject to change without notice.

### Note:

Dewesoft d.o.o. shall not be liable for any errors contained in this document. Dewesoft MAKES NO WARRANTIES OF ANY KIND WITH REGARD TO THIS DOCUMENT, WHETHER EXPRESS OR IMPLIED. DEWESOFT SPECIFICALLY DISCLAIMS THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. Dewesoft shall not be liable for any direct, indirect, special, incidental, or consequential damages, whether based on contract, tort, or any other legal theory, in connection with the furnishing of this document or the use of the information in this document.

The copy of the specific warranty terms applicable to your Dewesoft product and replacement parts can be obtained from your local sales and service office. To find a local dealer for your country, please visit <https://dewesoft.com/support/distributors>.

### 3.1. Calibration

Every instrument needs to be calibrated at regular intervals. The standard norm across nearly every industry is annual calibration. Before your Dewesoft data acquisition system is delivered, it is calibrated. Detailed calibration reports for your Dewesoft system can be requested. We retain them for at least one year, after system delivery.

### 3.2. Support

Dewesoft has a team of people ready to assist you if you have any questions or any technical difficulties regarding the system. For any support please contact your local distributor first or Dewesoft directly.

Dewesoft d.o.o.  
Gabrsko 11a  
1420 Trbovlje Slovenia

Europe Tel.: +386 356 25 300  
Web: <http://www.dewesoft.com>  
Email: [Support@dewesoft.com](mailto:Support@dewesoft.com)  
The telephone hotline is available Monday to Friday from 07:00 to 16:00 CET (GMT +1:00)

### 3.3. Service/repair

The team of Dewesoft also performs any kinds of repairs to your system to assure a safe and proper operation in the future. For information regarding service and repairs please contact your local distributor first or Dewesoft directly on <https://dewesoft.com/support/rma-service>.

### 3.4. Restricted Rights

Use Slovenian law for duplication or disclosure. Dewesoft d.o.o. Gabrsko 11a, 1420 Trbovlje, Slovenia / Europe.

## 3.5. Printing History

Version 2.0.0, Revision 217 Released 2015 Last changed: 23. July 2018 at 16:54.

## 3.6. Copyright

Copyright © 2015-2019 Dewesoft d.o.o. This document contains information which is protected by copyright. All rights are reserved. Reproduction, adaptation, or translation without prior written permission is prohibited, except as allowed under the copyright laws. All trademarks and registered trademarks are acknowledged to be the property of their owners.

## 3.7. Trademarks

We take pride in our products and we take care that all key products and technologies are registered as trademarks all over the world. The Dewesoft name is a registered trademark. Product families (KRYPTON, SIRIUS, DSI, DS-NET) and technologies (DualCoreADC, SuperCounter, GrandView) are registered trademarks as well. When used as the logo or as part of any graphic material, the registered trademark sign is used as a part of the logo. When used in text representing the company, product or technology name, the ® sign is not used. The Dewesoft triangle logo is a registered trademark but the ® sign is not used in the visual representation of the triangle logo.

# 4. Safety instructions

Your safety is our primary concern! Please be safe!

## 4.1. Safety symbols in the manual

### Warning

Calls attention to a procedure, practice, or condition that could cause the body injury or death

### Caution

Calls attention to a procedure, practice, or condition that could possibly cause damage to equipment or permanent loss of data.

## 4.2. General Safety Instructions

### Warning

The following general safety precautions must be observed during all phases of operation, service, and repair of this product. Failure to comply with these precautions or with specific warnings elsewhere in this manual violates safety standards of design, manufacture, and intended use of the product. Dewesoft d.o.o. assumes no liability for the customer's failure to comply with these requirements.

All accessories shown in this document are available as an option and will not be shipped as standard parts.

### 4.2.1. Environmental Considerations

Information about the environmental impact of the product.

### 4.2.2. Product End-of-Life Handling

Observe the following guidelines when recycling a Dewesoft system:

### 4.2.3. System and Components Recycling

Production of these components required the extraction and use of natural resources. The substances contained in the system could be harmful to your health and to the environment if the system is improperly handled at its end of life! Please recycle this product in an appropriate way to avoid unnecessary pollution of the environment and to keep natural resources.

This symbol indicates that this system complies with the European Union's requirements according to Directive 2002/96/EC on waste electrical and electronic equipment (WEEE). Please find further information about recycling on the Dewesoft web site [www.dewesoft.com](http://www.dewesoft.com)

Restriction of Hazardous Substances

This product has been classified as Monitoring and Control equipment and is outside the scope of the 2002/95/EC RoHS Directive. However, we take care of our environment and the product is lead-free.

### 4.2.4. General safety and hazard warnings for all Dewesoft systems

Safety of the operator and the unit depend on following these rules.

- Use this system under the terms of the specifications only to avoid any possible danger.
- Read your manual before operating the system.
- Observe local laws when using the instrument.
- DO NOT touch internal wiring!
- DO NOT use higher supply voltage than specified!
- Use only original plugs and cables for harnessing.
- You may not connect higher voltages than rated to any connectors.
- The power cable and connector serve as Power-Breaker. The cable must not exceed 3 meters, the disconnect function must be possible without tools.
- Maintenance must be executed by qualified staff only.
- During the use of the system, it might be possible to access other parts of a more comprehensive system. Please read and follow the safety instructions provided in the manuals of all other components regarding warning and security advice for using the system.
- With this product, only use the power cable delivered or defined for the host country.
- DO NOT connect or disconnect sensors, probes or test leads, as these parts are connected to a voltage supply unit.
- Ground the equipment: For Safety Class 1 equipment (equipment having a protective earth terminal), a non-interruptible safety earth ground must be provided from the mains power source to the product input wiring terminals.
- Please note the characteristics and indicators on the system to avoid fire or electric shocks. Before connecting the system, please read the corresponding specifications in the product manual carefully.

- The inputs must not, unless otherwise noted (CATx identification), be connected to the main circuit of category II, III and IV.
- The power cord separates the system from the power supply. Do not block the power cord, since it has to be accessible for the users.
- DO NOT use the system if equipment covers or shields are removed.
- If you assume the system is damaged, get it examined by authorized personnel only.
- Adverse environmental conditions are Moisture or high humidity Dust, flammable gases, fumes or dissolver Thunderstorm or thunderstorm conditions (except assembly PNA) Electrostatic fields, etc.
- The measurement category can be adjusted depending on module configuration.
- Any other use than described above may damage your system and is attended with dangers like short-circuiting, fire or electric shocks.
- The whole system must not be changed, rebuilt or opened.
- DO NOT operate damaged equipment: Whenever it is possible that the safety protection features built into this product have been impaired, either through physical damage, excessive moisture, or any other reason, REMOVE POWER and do not use the product until the safe operation can be verified by service-trained personnel. If necessary, return the product to Dewesoft sales and service office for service and repair to ensure that safety features are maintained.
- If you assume a more riskless use is not provided anymore, the system has to be rendered inoperative and should be protected against inadvertent operation. It is assumed that a more riskless operation is not possible anymore if the system is damaged obviously or causes strange noises. The system does not work anymore. The system has been exposed to long storage in adverse environments. The system has been exposed to heavy shipment strain.
- Warranty void if damages caused by disregarding this manual. For consequential damages, NO liability will be assumed!
- Warranty void if damage to property or persons caused by improper use or disregarding the safety instructions.
- Unauthorized changing or rebuilding the system is prohibited due to safety and permission reasons (CE).
- Be careful with voltages >25 VAC or >35 VDC! These voltages are already high enough in order to get a perilous electric shock by touching the wiring.
- The product heats during operation. Make sure there is adequate ventilation. Ventilation slots must not be covered!
- Only fuses of the specified type and nominal current may be used. The use of patched fuses is prohibited.
- Prevent using metal bare wires! Risk of short circuit and fire hazard!
- DO NOT use the system before, during or shortly after a thunderstorm (risk of lightning and high energy over-voltage). An advanced range of application under certain conditions is allowed with therefore designed products only. For details please refer to the specifications.
- Make sure that your hands, shoes, clothes, the floor, the system or measuring leads, integrated circuits and so on, are dry.
- DO NOT use the system in rooms with flammable gases, fumes or dust or in adverse environmental conditions.
- Avoid operation in the immediate vicinity of high magnetic or electromagnetic fields, transmitting antennas or high-frequency generators, for exact values please refer to enclosed specifications.
- Use measurement leads or measurement accessories aligned with the specification of the system only. Fire hazard in case of overload!

- Lithium ion batteries are classified as not hazardous when used according to the recommendations of the manufacturer described in Battery Safety Data Sheet, which is available for download from [this link](#).
- Do not switch on the system after transporting it from a cold into a warm room and vice versa. The thereby created condensation may damage your system. Acclimatise the system unpowered to room temperature.
- Do not disassemble the system! There is a high risk of getting a perilous electric shock. Capacitors still might be charged, even if the system has been removed from the power supply.
- The electrical installations and equipment in industrial facilities must be observed by the security regulations and insurance institutions.
- The use of the measuring system in schools and other training facilities must be observed by skilled personnel.
- The measuring systems are not designed for use in humans and animals.
- Please contact a professional if you have doubts about the method of operation, safety or the connection of the system.
- Please be careful with the product. Shocks, hits and dropping it from already- lower level may damage your system.
- Please also consider the detailed technical reference manual as well as the security advice of the connected systems.
- This product has left the factory in safety-related flawlessness and in proper condition. In order to maintain this condition and guarantee safety use, the user has to consider the security advice and warnings in this manual.

#### EN 61326-3-1:2008

IEC 61326-1 applies to this part of IEC 61326 but is limited to systems and equipment for industrial applications intended to perform safety functions as defined in IEC 61508 with SIL 1-3.

The electromagnetic environments encompassed by this product family standard are industrial, both indoor and outdoor, as described for industrial locations in IEC 61000-6-2 or defined in 3.7 of IEC 61326-1.

Equipment and systems intended for use in other electromagnetic environments, for example, in the process industry or in environments with potentially explosive atmospheres, are excluded from the scope of this product family standard, IEC 61326-3-1.

Devices and systems according to IEC 61508 or IEC 61511 which are considered as “operationally well-tried”, are excluded from the scope of IEC 61326-3-1.

Fire-alarm and safety-alarm systems, intended for the protection of buildings, are excluded from the scope of IEC 61326-3-1.

## 4.3. Documentation version history

| Version | Date      | Notes                                                                                                                                                        |
|---------|-----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| V23-1   | 3.10.2023 | -Initial version; same content as in Accessories manual that was discontinued and DSI-LVDT and DS-16xLVDT                                                    |
| V24-1   | 3.9.2024  | -Removed Type C specifications for DSI-TH and DSI-TH-UNI<br>- Added filtering information for DSI-CHG-50 and DSI-ACC<br>- Added DSli-10A, DSli-20A           |
| V25-1   | 31.1.2025 | -DSI-CHG-DC: added UNI as compatible amplifier                                                                                                               |
| V25-2   | 15.4.2025 | -Added C type of thermocouple for DSI-TH-UNI and additional information of versions needed to use this feature                                               |
| V25-3   | 21.7.2025 | -Changed the range specifications for DSI-TH-K due to scaling limitations<br>- Added mating connector for DSI-RTD-LIS4-TNC<br>- Change render for DSI-CHG-DC |
